

*Looking to fix your OEM CV Joints?*

Reduces Repair Costs by Providing Rebuilding Components for oem ATV, UTV & Mini Truck CV Joints

Motor Master Powersports  
CV Rebuild Kits Allow Rebuilding  
of ATV, UTV & Mini Truck OEM  
CV Joints...

In the past, repairing a worn or damaged OEM CV joint for an ATV, UTV or Mini Truck often required replacement of the complete CV axle, as many manufacturers don't offer components to rebuild the OEM CV joint itself. Replacement options were limited to an expensive OEM CV joint or CV axle, or a less expensive and lower quality aftermarket

CV axle. For some vehicle models the only option was a new OEM CV axle, as no aftermarket equivalents exist. Now there is a new and better alternative; Motor Master Powersports CV Rebuild Kits. The kits contain a new inner race, cage, bearings, CV boot, snap rings, grease and detailed instructions to properly rebuild ATV and UTV OEM CV joints to original specification. Thereby allowing the original CV axle to be retained, and at a fraction of the cost of a new OEM unit. Top quality components are used in CV Rebuild Kits including precision engineered inner races and cages, premium polyurea based grease, and Rockford Duraboot high-strength CV boots that provide greater strength and durability than OEM CV boots. Motor Master Powersports provides inboard and outboard CV joint rebuild kits for a wide range of ATV's, UTV's and Minitrucks. Made in the USA.
